INTRODUCING

BLANKET & SOLUTION WARMING CABINETS

Warm your blankets, fluids and solutions quickly and safely with our Imperial Surgical Ltd. Warming Cabinet.

Our warmers are ergonomic, aesthetically designed, and use state-of-the-art microprocessors.

NEW! Easy Access System
- We have made every aspect of the cabinet easy to service - with a simple turn of a secured key, all the electrical components are exposed.

CABINET DESIGN
- Cabinets are designed to ensure maximum storage
- All cabinet bodies and interior components are fully welded stainless steel with a #4 polished finish and insulated with R-6 rating
- Cabinets come complete with adjustable leveling feet
- Cabinet doors are fully insulated stainless steel with a reversible hinge/handle assembly (for left or right opening configurations)
- The door and frame are sealed using a high-temperature rubber gasket with a magnetic insert; this provides a guaranteed air tight seal and prevents the possibility of heat loss
- Stainless steel: 18 gauge exterior, 20 gauge door and shelves

- Interior shelves are perforated stainless steel providing excellent weight capacity with no flexing
- Perforations allow for improved air circulation
- All shelves are designed with fully welded retainers and stops to prevent tipping when in the extended position (up to 50%) or accidental removal. They are adjustable in 1" height increments.

TEMPERATURE CONTROL
- A microprocessor-based thermostat, complete with digital display, accurately controls the temperature setting.
- Temperature setting and display are accurate to within +/- 1.5 degrees Celsius (+/- 2.7°F)
- Units available in Fahrenheit or Celsius. Please specify when ordering. The default is Celsius.

- All cabinets are equipped with a high-temperature overload switch which will disconnect all power to the cabinet should an electrical malfunction occur
- Microprocessor thermostat controller is pre-set by the factory; re-programming is user-friendly
- Standard maximum temperature selection is 71°C/160°F in order to avoid accidentally injuring the hospital staff or patient
- A high-temperature warning light is also provided should the cabinet temperature exceed the pre-selected setting by 6°C/10°F
- On request, the maximum setting can be programmed up to 82°C/180°F.
- Units with double compartment cabinets include two microprocessor thermostats individually controlling each cabinet
- Cabinet heat is provided by heavy-duty low wattage tubular elements for safe even heating; element cycles are monitored by a pilot light indicator on the control panel
- All electronic components are easily accessible for maintenance.

7 Year Warranty
We offer one of the best warranties in the industry. First year covers parts and labor, the remaining 6 years for parts only. If any part breaks due to normal wear and tear or is defective it will be replaced. Warranty includes everything: fans, couplers, processors, hinges, there are no exclusions. The stainless steel cabinet is warranted for 7 years against manufacturing defects.

User Instructions: User instructions are written on the front panel. Instructions are available in multiple languages (call for details.)

Redundant Safety: Should the temperature elevate more than 20% above the maximum it will shut down completely.

Cool Cabinet: Our insulation R factor is probably one of the best. Even when running at maximum temperature the exterior of the cabinet will remain cool.

COOLING TECHNOLOGY
- A long lasting muffin fan system provides improved air distribution throughout the cabinet and rapid heat recovery.
- Our unique magnetic gaskets ensure a tight seal with no mechanical handles that can break or require maintenance.
