BATRIK DAYBRUSH™ CHANNEL BRUSHES

REUSABLE

Our Reusable DayBrush™ Channel Brushes can be used for cleaning endoscopes for an entire day. In fact, it's been proven to effectively clean up to 10 scopes before the need to discard.*

- Soft tip ensures easy manipulation within the channel with no risk of damage
- The back-end is sealed and softened to prevent fluid from getting trapped inside the tube. The softening process also prevents damage if the cleaning brush is used in reverse.
- Can be steam sterilized.
- Bristle volume is 20mm in length – nearly double most brushes on the market. A large brush provides more surface contact during the cleaning process.
- Significant per use savings when compared to other reusable or disposable channel cleaning brushes.

() Discard after cleaning 10 scopes or sooner if any brush degradation is noticed. After ten applications, the brush may have the appearance that it can continue to clean effectively, but we discourage prolonged use due to risk of cross contamination. Actual number of uses will vary based on handling and processing.*

ENZYMATIC & NON-ENZYMATIC CLEANERS

Our Enzymatic and Non-Enzymatic Cleaners are specially formulated to remove organic material from medical equipment and instrumentation.

Our **Enzymatic Cleaner** formats are formulated with PrAmLi Power3 Enzymes™, our proprietary unique blend of enzymes, and a surfactant to efficiently remove all proteins, blood, fatty tissue, and more. They also remove stains from surgical scrubs, linens, and medical clothing.

ARC™ WIRE STYLE BRUSHES

SINGLE-USE AND REUSABLE

You've got options with our ARC™ Wire Brushes. Our single-use and reusable brushes are available in both flexible and rigid varieties and come in a multitude of sizes. ARC™ Wire Brushes are guaranteed to last longer than twisted wire and preserve the integrity of your valuable instruments.

BRUSH SELECTION TIPS:

INSTRUMENT SPECIFICATIONS

What is the maximum length of the instrument(s) to be cleaned?

Add at least 2" (5cm) to that length, so you have an adequate length to work with.

What is the inner diameter of the instrument?

Add at most 0.125" (3mm) to determine the diameter of the bristle to ensure effective cleaning. The bristle diameter has to slightly exceed the inner tube diameter. Bristles that are too large will bend too much and not clean effectively.

BRUSH SELECTION

Simply find the section in our catalogue that best corresponds to the overall length and diameter of your instrument. As a rule, if your present brush is 8" (20.32cm) in length and we only offer 10" (25.4cm) length with your required diameter, that is entirely acceptable.

In many cases, our ARC™ Wire Brushes will have more bristles on the brush. As an example, many 5mm (0.19") diameter brushes are only 1" (2.5cm) in length. At BATRIK, we strived to provide the greatest amount of bristles to ensure the most effective cleaning.

CUSTOMIZABLE WIRE BRUSHES

A unique aspect of single-use ARC™ Wire Brushes is that they can be customized to any length:

- Up to 2000mm for Wire Brushes on plastic semi-rigid sheaths, rigid brushes from 5 to 20mm in diameter.
- No limit in length for Wire Brushes on flexible plastic sheaths, flexible brushes from 2-5mm in diameter

INSTRUMENT CLEANING

FLAT BRUSHES

Our Instrument Cleaning Flat Brushes are specifically designed for hospital use in the pre-clean and preparation of instruments.

- Long ergonomic handle permits ease-of-use
- Extra long length of brush head (60 [±5] mm in Single-Use and 75 [±5] mm in Reusable)
- Transparent brush fibers allow for quick verification of its cleanliness
- The plastic handle will not release any toxic components
- Available in 6 models (4 reusable/autoclavable and 2 single-use)

**FLEXIBLE**

This brush is designed for large instruments that require a more gentle cleaning application such as optics, plastics, or hard to reach spot.

**EXTRA FLEXIBLE**

The very long, flexible bristles eliminate any stress during sanitation, and makes this the ideal brush for fragile instruments as well as both pliable and rigid endoscopes. The length of the bristles assist in cleaning areas that would otherwise be difficult to reach, such as the accessory channel or tip deflection of pliable endoscopes.

**RIGID**

The rigidity of this brush, along with the length of the bristles and handle, improves and simplifies instrument cleaning.

**EXTRA RIGID**

Instrument safe polyamide fibers offer steel-like rigidity and allows deep cleaning of soiled instruments, particularly in grooved or uneven surfaces.

TRIFECTA™ BRUSH

INSTRUMENT CLEANING

Introducing the **Trifecta™ Brush**, a versatile **3-in-1 tool** designed to meet all your instrument cleaning needs. This reusable instrument brush is available in two styles: one with **all-nylon** bristles for gentle cleaning and another with nylon bristles on two sides and **stainless steel bristles** on the third, ideal for tackling tougher buildup and stubborn cleaning tasks. This innovative design ensures effective, thorough maintenance for a wide range of instruments.

TRIFECTA™ BRUSH - NYLON

1 NYLON BRISTLES

Gentle, transparent nylon bristles provide an effective yet safe cleaning solution. This side allows you to verify cleanliness easily, without risking damage to delicate surfaces. Ideal for a light, non-invasive clean.

2 PRECISION TIP

Reach those hard-to-clean spots with the precision tip. This small, firm-bristle tip is designed for tight, hard-to-reach areas, such as instrument jaws and box joints. It ensures a deep clean where it's most needed, without the risk of damage or injury to delicate parts.

3 FIRM NYLON BRISTLES

For tougher residues, the firm nylon side delivers the cleaning power you need. With bristles that feel similar to stainless steel but are safe for your instruments, this side easily handles stubborn dirt and buildup.
